THE PRODUCT PROMISE

An algebra tutor that remembers what a student knows—and what they're about to forget.

For learners aged 12–16, from fragile foundations through secondary algebra.

1

See the gap

Diagnose the learner's actual prerequisite—not just the current worksheet.

→

2

Teach the next step

Use checked answers, worked examples and support that grows only when needed.

→

3

Bring it back later

Schedule a short, effortful retrieval so today's learning survives.

DESIGNED FOR

Homework · revision · catch-up

WORKS WHEN

No adult is watching

STAYS LEGIBLE TO

The responsible adult

HOW IT WORKS

One learner. Two surfaces. One continuously updated model.

The channels have deliberately different jobs—and the learner model connects them.

STUDENT STARTS

CHECKER FIRST

WEBCHAT

A full tutoring session

- Diagnose
- Explain and model
- Guide practice

→

UPDATES EVERY TURN

LEARNER MODEL

What to teach—and when

- **Mastery**
- Retention
- Prerequisites

→

SYSTEM STARTS

MESSAGING

A brief retrieval moment

- 2–3 items
- Chosen interval
- Agreed hours

Support expands only when struggle is unproductive

1. **Prompt**
2. **Hint**
3. **Partial step**
4. **Worked step**
5. **Parallel try**

WHAT MATTERS

Success is what the student can still do later.

Time in the product is a guardrail—not the goal.

01 RETENTION

Retrieve a skill later, without warning or prompting.

02 TRANSFER

Solve a new item form that was not used in instruction.

03 PREREQUISITE REPAIR

Close the earlier gap that was blocking current algebra.

TRUST & SAFETY

- Checked answers before tutor judgment
- No dependency or guilt mechanics
- Adult-legible model; minimal data
- Defined distress or harm escalation

V1 BOUNDARY

60–90 algebra skills · authored items · symbolic checking · scheduled review · adult view

Not yet: geometry, statistics, trigonometry, voice, photos or classroom management.

STILL TO DECIDE Curriculum spine · adult audience · item-authoring workflow · final name & first messaging channel
